

Compliance Metrics Application

In today's volatile business environment, organisations face a wide array of complex business risks. Governance, Risk and Compliance (GRC) now drive many IT Security initiatives and projects.

Effective management can be challenging, given the need to collect, manage and securely report large amounts of information across your organisation.

How do you currently manage your compliancy projects? Does your current solution allow for quick and detailed analysis of all stored data? A complex and convoluted process often results in frustration from all sides. Do you have a need to simplify your compliance management projects?

Do you have a system that provides quick distribution of information requirements to teams and third parties? How do you manage the requirements for each area? Do you have a management system that allows multiple teams to collaborate and record information securely? Do the interested parties have enough visibility to keep track of areas for attention?

How do you collate and manage the project information that pertains to risk and compliance? Do you have a system that can collect all the required organisation specific information, including images? Can you currently monitor and report on compliance trends by filtering all responses from high level down to individual sections?

Can you provide a complete audit trail of actions and track and monitor how and when information is accessed? Do you have the reassurance that access to information such as this, which is of critical importance to your organisation is fully accountable? Can your project teams record all the data needed to provide proof and historical documentation with respect to compliance requirements?

MWR InfoSecurity can provide a solution to all of these issues through the **Compliance Metrics** module. This service allows large numbers of information owners to submit their own compliance data, which can then be distributed to and tracked by the relevant risk managers. This means greater visibility of unmitigated risk, freeing your organisation to do the real work of managing and reducing your business risk while achieving compliance.

Compliance Metrics brings you:

Simplification, through its consolidated management, which includes the ability to assign, track and review the questionnaires.

Visibility, through its Multi-tier reporting which ensures that you always know your current status and actions required.

Control, through its full auditing facility, and assurance that the information gathered remains secure through authenticated access and distribution.

Efficiency, through improved use of resources, enabling collaboration internally and externally with third parties.
