# Advanced Distributable Reporting (ADR)

As someone with responsibility for Information Security, you may find that managing the associated risk results in more challenges than solutions. If you have a requirement to distribute the findings of security testing to the people who need to resolve the issues, how do you do it efficiently and securely?

---

## How easy is it for you to distribute your security test results to the right people?

Often the hardest challenge comes from organising the technical findings. Can you easily and securely assign accountability for remediation activities and set deadlines? Can you limit access rights to ensure the right level of access necessary for any user or team internally or externally?

## Do you have the ability to track and prioritise remediation activities?

Do you have the ability to review and accept risk that is highlighted during security testing? Increasing visibility through the remediation process helps improve effectiveness and reduce timescales.

## How do you provide third parties with details about vulnerabilities they need to resolve without revealing sensitive information relating to your organisation's security?

Do you have the ability to limit access rights to ensure the right level of access necessary for any user or team internally or externally?

## How do you maintain an audit trail of user access to vulnerabilities within your organisation?

Do you have the reassurance that accountability exists for user's

access to information? Our security tool **ADR** ensures that challenges relating to vulnerability remediation can be avoided and you and your team can concentrate on reducing external threats.

MWR InfoSecurity can provide a solution to all of these issues through its **Advanced Distributable Reporting (ADR)** service.

This allows information obtained as a result of security testing activities to be distributed to the relevant teams within your organisation. It allows greater visibility of outstanding risk and empowers your organisation to work together to manage and mitigate it. ADR is available through MWR InfoSecurity's FastHold platform and is closely integrated to the suite of risk management tools that FastHold provides.

---

*ADR gives me the confidence to be able to hand responsibility for risk mitigation to the relevant parts of my business, whilst retaining the ability to view the current status at any time.*

*Chief Information Officer,*

*Financial Sector*

---

The **FastHold** platform was specifically designed and developed to empower organisations to measure and manage their risk in close partnership with MWR InfoSecurity’s experts in the field of Information Security.

The benefits of the ADR Service and its integration with the FastHold platform include:

**FastHold offers customisable reporting and management of user access** allowing you to control the level of access for users within your organisation. HTML reports allow you to drill down into greater detail.

**Assign issues for review or to be resolved;** this feature offers the ability to add notes or to set deadlines. This enables you to truly take control of the vulnerabilities on your network and manage your remedial action effectively.

**Prioritising issues** within the system ensures that the team are aware where to focus their efforts and can work together to resolve vulnerabilities within the network.

**Controllable user access** ensures that colleagues or third parties can only access the

information they require to do their job. Sensitive information relating to the overall security of the company remains confidential.

**Risk Acceptance** allows you to accept risks based on accurate descriptions that are specifically tailored to describe how they affect **your** systems and environment.

Using ADR with your security testing report will give you the ability to control the distribution of findings and prioritise their remediation. The benefits of the service exceed the increase in efficiency and effectiveness this brings to your Information Security Management Programme.

It empowers you to manage your risk more effectively and allows you to confidently measure and manage the risk within your organisation.

Contact us directly on +44 (0) 1256 300920 for more information about how the service could benefit your organisation or to arrange a demonstration.
